

Ken Peakman, A.Sc.T.

“As a child growing up on the family farm and watching my father repair and build farm tools and equipment, it was in my curious nature to follow in his footsteps. I’ve always enjoyed figuring out how and why things work the way they do. Pursuing a career in Mechanical Engineering Technology was the logical choice for me.”

“I had two major influences in my career decision: my father, who liked to create and make things with his hands, and a Mechanical Technology grad from the small town community where I grew up. I had the pleasure of working for him during the summer months throughout highschool. I owe both my father and my mentor a debt of gratitude for sharing their knowledge and life skills that I’ve carried with me throughout my professional career.”

“My professional designation as an ASCT in Mechanical Engineering Technology gives my clients the assurance that I am qualified to perform the services that I offer, and most importantly, that I am subject to a stringent Code of Conduct and Code of Ethics in my profession.”

“Although I’ve experienced many notable accomplishments over the years in my profession (some of which are inventing patents on equipment I’ve designed while working for other companies), out of all of them, I would say my biggest achievement would have to be owning my own business for ten years - Precision Design Inc.”

“I currently serve as a qualified Auditor for Technology Accreditation Canada (TAC), as well as serving on the TPS Registration and Examination Boards. My volunteering involvement doesn’t end there. I also volunteer in my community as a Board Member, manager, and coach for various sports clubs and teams. In my spare time, I like to golf, camp, spend time with family and friends, and I still like to build and repair things when I get a chance.”
